Construction Grammar (CxG)

Construction Grammar (CxG)

Cxs differ for their degree of schematicity:

- morphemes (e.g., pre-, -ing)
- complex words (e.g., daredevil)
- filled or partially-filled idioms
(e.g., give the devil his dues or Jog (someones) memory)
- more abstract patterns ditransitive Cxs [Subj V Obj1 Obj2])

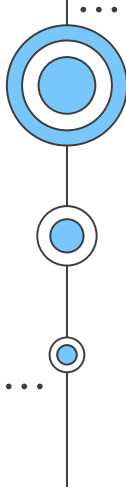

High frequency token
input

More abstract
schematic superordinate
construction

Mental Entrenchment
(domain-general cognitive processes):
categorization/chunking/analogy/cross-modal
association

...

a-judge-found-him-guilty-construction

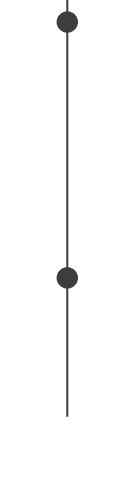

High frequency token
input

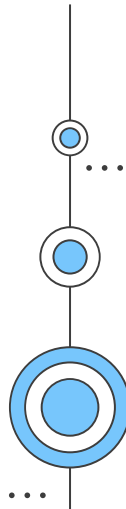

More abstract
schematic superordinate
construction

He drank himself silly.

Mental Entrenchment
(domain-general cognitive processes):
categorization/chunking/analogy/cross-modal
association

...

...

Construction Grammar (CxG)

Cxs differ for their degree of schematicity:

- High frequency
- Several slots to fill in
- Non-compositional

貴到爆(`××`)

How to capture constructions?

Possible Applications

Construction and Sentiment

Multimodality Construction

- A typical “image macro” meme consists of three elements:
 - Background image
 - Top text (TT): formulaic and easily recognizable
 - Bottom text (BT): delivers ‘the punch line’ of the meme
